Srinivas Kanagare J

8792707526 kangaresrinivas@gmail.com GitHub LinkedIn Portfolio Pune, India

PROFESSIONAL SUMMARY

Computer Science graduate with practical experience developing AI-powered applications, machine learning models, and backend systems. Experienced in Python, LLMs, RAG pipelines, multi-agent systems, and REST API development. Skilled in integrating AI models, building retrieval workflows, and deploying applications using Docker, GitHub Actions, and Kubernetes.

EDUCATIONS

Atria Institute of Technology | Bangalore — 2022 - 2026
Bachelor of Engineering (B.E.) – Computer Science and Design — *CGPA : 7.41/10*

WORK EXPERIENCE

Android App Development using Gen AI Intern | Internship — Feb 2026 - May 2026
MindMatrix.io (CL Infotech Pvt. Ltd.) — *Remote • Bangalore, Karnataka*

- Developed and supported application features through structured **Android development** tasks and practical projects.
- Assisted with feature implementation, testing, debugging, and documentation.
- Applied software development concepts in a product-oriented environment with **cross-functional collaboration**.

Technologies / Skills Used : *Android Studio, Java, Kotlin, Jetpack, Gen AI, Gradle*

PROJECTS

Research Desk — Multi-Agent AI Research System | Github Vercel
Developer

- Developed a multi-agent AI research system that automates web research, source extraction, report generation, and AI-based report critique.
- Built a React dashboard with FastAPI integration, real-time research progress streaming using Server-Sent Events (SSE), and PDF report export.
- Deployed the frontend on Vercel and backend on Render, integrating LLM APIs and web search tools for automated research workflows.

Technologies / Tools Used : *Python, React, FastAPI, LangChain, Tavily API, BeautifulSoup, SSE, Vercel, Render*

RAG Based AI Teaching Assistant | Github
Developer

- Developer Built a RAG-based AI assistant in Python that combined Groq LLMs, embeddings, and semantic search to generate context-aware responses.
- Implemented retrieval and chunking pipelines with Ollama and OpenAI Whisper to convert educational content into a searchable knowledge base.
- Exposed the system through Flask REST APIs with streaming responses for real-time answer delivery.

Technologies / Tools Used : *Python, React, Flask, Embedding, Scikit-learn, Joblib, GenAI, LLMs, Numpy, Pandas, REST APIs*

Brain Tumor Detection System | Kaggle.com
Developer

- Developed a multi-class image classification model in TensorFlow using InceptionV3 for MRI scan classification.
- Fine-tuned the model with early stopping and checkpointing, reaching 88.75% accuracy.
- Handled preprocessing, augmentation, normalization, and dataset preparation to improve model generalization.
- Presented the research work at **ICETSE 2025**.

Technologies / Tools Used : *Python, TensorFlow, InceptionV3, Machine Learning*

SKILLS

AI / ML :	NLP, TensorFlow, Keras, Scikit-learn, Transfer Learning, NumPy, Pandas
LLM / GenAI :	RAG, LangChain, LangGraph, Multi-Agent Systems, Prompt Engineering, Embeddings, Semantic Search, Tool Calling, Groq API, Gemini API, Ollama
Programming Languages :	Python, JavaScript, SQL, Java, C++, C
Backend / Web :	FastAPI, Flask, React.js, REST APIs, SQLAlchemy, HTML5, CSS3, Tailwind CSS
Databases :	MySQL, MongoDB, PostgreSQL, SQLite
DevOps / Cloud :	Git, GitHub, GitHub Actions, Docker, Kubernetes, Linux, Postman, AWS
